JOIN US FOR A FREE MORNING SESSION

Meet with experts from Oracle and Egenera as they outline how you can manage complexity and lower your IT costs. Learn how Oracle's 10*g* **virtualized infrastructure** software running on an Egenera BladeFrame system can enable your business to provision systems and allocate resources in minutes – not days, weeks or months – to optimize mission-critical applications in real time.

Today's new architecture – **grid computing** – offers an opportunity to improve your IT infrastructure while lowering costs. Oracle's grid infrastructure pools your IT resources into a single virtual computer that analyzes demand and adjusts supply accordingly. Oracle 10*g* is the first infrastructure software designed specifically for enterprise grid computing.

Egenera is a global leader in delivering computing solutions that **simplify datacenter operations and infrastructure**. The Egenera BladeFrame simplifies the datacenter with an innovative server architecture specifically designed to reduce complexity and enable IT to respond rapidly to business requirements.
